BUSINESS REQUIREMENTS DOCUMENT (BRD)

Project: CashFlow 360 – Accounts Receivable Analytics

Document Type: Portfolio Project
Version: 1.0
Prepared For: Finance and Accounts Receivable Teams

1. Project Overview

CashFlow 360 is an Accounts Receivable Analytics solution designed to provide visibility into invoices, customer payments, outstanding balances, overdue invoices, and collection performance through SQL analysis and an interactive Power BI dashboard.

2. Business Problem

Businesses need to monitor outstanding invoices and delayed customer payments to maintain healthy cash flow. Without consolidated reporting, identifying overdue invoices, monitoring collection performance, and prioritizing customer follow-ups can become difficult.

3. Business Objectives

- Monitor total invoiced, collected, and outstanding amounts.
- Identify overdue invoices and analyze invoice aging.
- Evaluate customer and regional collection performance.
- Analyze payment trends and payment methods.
- Support better collection prioritization through data-driven insights.

4. Stakeholders

- Finance Manager
- Accounts Receivable (AR) Team
- Collections Team
- Business Management

5. Business Requirements

ID	Requirement
BR-01	Track total invoiced amount.
BR-02	Monitor total collected and outstanding amounts.
BR-03	Identify overdue invoices and overdue amounts.
BR-04	Analyze invoices across aging buckets.

BR-05	Identify customers with the highest overdue balances.
BR-06	Compare outstanding amounts across regions and customer segments.
BR-07	Analyze monthly payment and collection trends.
BR-08	Evaluate payment methods and payment behavior.

6. Key Performance Indicators (KPIs)

- Total Invoiced Amount
- Total Collected Amount
- Total Outstanding Amount
- Overdue Amount
- Collection Rate
- Number of Overdue Invoices
- Average Days Overdue
- Average Payment Amount

7. Functional Requirements

The Power BI dashboard should provide:

Page 1 – Executive Overview

- Overall financial KPIs
- Monthly collection trend
- Top customers by outstanding amount
- Outstanding amount by customer segment
- Overdue amount by aging bucket
- Collection by payment method

Page 2 – Invoice Aging & Customer Analysis

- Overdue amount and invoice count
- Customer-wise overdue analysis
- Segment-wise overdue analysis
- Region-wise outstanding analysis
- Top overdue invoices for follow-up prioritization

Page 3 – Payment & Collection Trends

- Total and average payment metrics
- Monthly payment trend
- Payment method analysis
- Segment-wise payment analysis
- Region-wise payment analysis

Interactive Filters

- Invoice Date
- Region
- Customer Segment

Filters should work across all three report pages.

8. Data Requirements

The solution uses four relational tables:

- Customers
- Invoices
- Payments
- Regions

The data is synthetic and created for portfolio demonstration purposes. It does not represent actual company or customer transactions.

9. Tools & Technologies

- PostgreSQL – Data storage and SQL analysis
- Microsoft Power BI – Dashboard development and visualization

10. Expected Business Outcomes

- Improved visibility into accounts receivable.
- Faster identification of overdue invoices.
- Better understanding of customer payment patterns.
- Improved monitoring of collection performance.
- Data-supported prioritization of collection follow-ups.

11. Assumptions & Limitations

- Dataset is synthetic.
- Business rules and priority thresholds are defined for demonstration purposes.
- Dashboard insights are intended for analytical and decision-support purposes, not automated payment collection.

12. Project Deliverables

- PostgreSQL database with relational tables.
- SQL analysis queries.
- Interactive Power BI dashboard with three report pages.
- Business Requirements Document (BRD).
- Project documentation and README.
